

Getting started with software distributions

A quality version of this page, approved on 24 June 2020, was based off this revision.

What is a Linux® distribution?

"A Linux® distribution (often abbreviated to **distro**) is an **operating system** made from a software collection, which is based upon the Linux® kernel and often upon a package management system. Linux® users usually obtain their operating system by downloading one of the Linux® distributions which are available for a wide variety of systems ranging from embedded devices and personal computers to powerful supercomputers." (source: https://en.wikipedia.org/wiki/Linux_distribution)

Getting started with software distributions

What's composing a distribution?

Which microprocessor device supports which distributions?

How to download source code?

How to build?
