

Getting started

-
- Getting started
 - STM32MP1 boards
 - STM32MP157x-DK2
 - Let's start
 - Unpack the STM32MP157x-DK2 board
 - Populate the target and boot the image
 - Execute basic commands
 - Use the demo launcher
 - Develop on Arm® Cortex®-A7
 - Install the SDK
 - Create a simple hello-world application
 - Modify, rebuild and reload the Linux® kernel
 - Develop on Arm® Cortex®-M4
 - Install the IDE
 - Install STM32Cube MP1 package
 - Modify, rebuild and reload a firmware
 - What's next
 - STM32MP157x-EV1
 - Let's start
 - Unpack the STM32MP157x-EV1 board
 - Populate the target and boot the image
 - Execute basic commands
 - Use the demo launcher
 - Develop on Arm® Cortex®-A7
 - Install the SDK
 - Create a simple hello-world application
 - Modify, rebuild and reload the Linux® kernel
 - Develop on Arm® Cortex®-M4
 - Install the IDE
 - Install STM32Cube MP1 package
 - Modify, rebuild and reload a firmware
