

How to debug Weston

How to debug Weston

Stable: 03.10.2019 - 13:43 / Revision: 03.10.2019 - 13:41

1 Wayland logs

To get the logs of the wayland protocol messages, set this environment variable:

```
Board $> export WAYLAND_DEBUG=1
```

2 Saving Weston logs in a file

Standard Weston logs are available in the `/var/log/weston.log` file when Weston is started using the systemd service.

```
Board $> cat /var/log/weston.log
```

3 Displaying Weston logs on a console

Start Weston with the following command:

```
Board $> weston --tty=1 &
```

All Weston logs are then displayed on the console.
