## 1 Article purpose

This article introduces the SAI Linux<sup>®</sup> driver for the SAI internal peripheral.

## 2 Short Description

The SAI<sup>[1]</sup> Linux driver is an ASoC CPU DAI driver implemented in the Linux ALSA framework.

## 3 Configuration

### 3.1 Kernel Configuration

Activate the SAI<sup>[1]</sup> Linux driver in the kernel configuration using the Linux Menuconfig tool: Menuconfig or how to configure kernel.

```
[*] Device Drivers
  [*] Sound card support
    [*] Advanced Linux Sound Architecture
      [*] ALSA for SoC audio support
        STMicroelectronics STM32 SOC audio support
          [*] STM32 SAI interface (Serial Audio Interface) support
```

## 3.2 Device tree

Refer to the [SAI device tree configuration](#) article when configuring the SAI Linux kernel driver.

## 4 How to use

The SAI Linux driver can be accessed from userland through an ALSA device. Refer to [ALSA overview](#) for information on how to list and use ALSA devices.

## 5 How to trace and debug

The `debugfs` and `procfs` file system can be checked to get information on the SAI driver and the resources it uses. A non-exhaustive list of these file system entries is provided below. Refer to [ALSA overview](#) for more details on debugging tools.

- `debugfs` entries:
  - **asoc**: refer to [ALSA\\_overview#How\\_to\\_monitor](#)
  - **clk**: refer to [Clock\\_overview#How\\_to\\_monitor\\_with\\_debugfs](#) to get information on clocks.
  - **pinctrl**: refer to [Pinctrl\\_overview#How\\_to\\_monitor](#) to get information on pins.
  - **regmap**: allow to monitor SAI peripheral registers.

```
$ cat /sys/kernel/debug/regmap/xxx.audio-controller/registers
```

- `procfs` entries:
  - **asound**: refer to [ALSA\\_overview#How\\_to\\_debug](#)
  - **interrupts**: allow to check interrupts.

```
$ cat /proc/interrupts
```

## 6 Source code location

The STM32 SAI peripheral includes two independent audio subblocks that share common resources. The driver source code reflects this architecture.

`sound/soc/stm/stm32_sai.c` : handles common resources such as clock, interrupt, reset and shared register.

`sound/soc/stm/stm32_sai_sub.c` : handles the resources dedicated to each subblock.
